Notes:

- 1. Luminous intensity is measured with a light sensor and filter combination that proximities the CIE eye-response curve.
- 2. θ 1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. Caution in ESD :

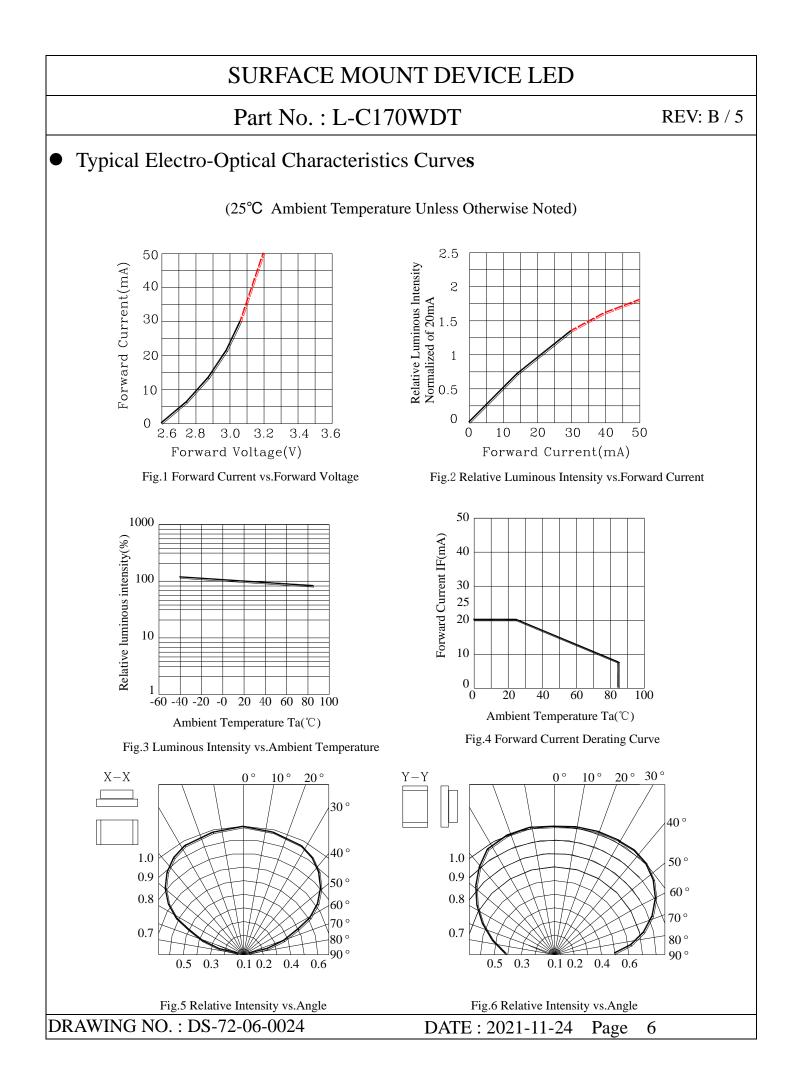

Static Electricity and surge damages the LED. It is recommended use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

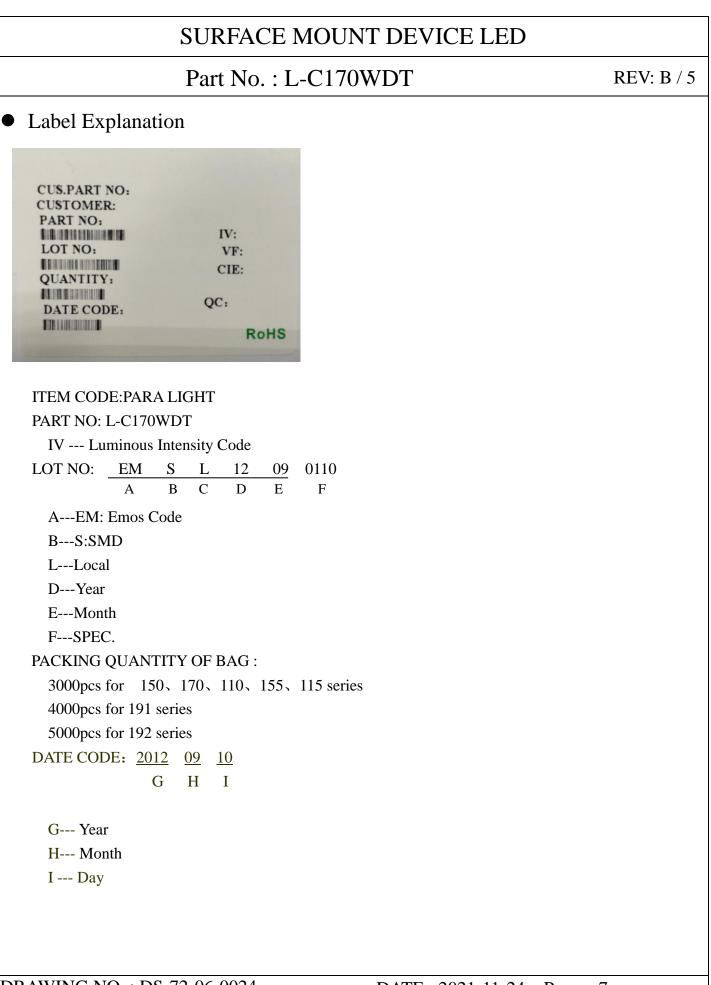

4. Major standard testing equipment by "Instrument System" Model : CAS140B Compact Array Spectrometer and "KEITHLEY" Source Meter Model : 2400.

• Cleaning

- * If cleaning is required , use the following solutions for less than 1 minute and less than 40° C.
- * Appropriate chemicals: Ethyl alcohol and isopropyl alcohol.
- Effect of ultrasonic cleaning on the LED resin body differs depending on such factors as the oscillator output, size of PCB and LED mounting method. The use of ultrasonic cleaning should be enforced at proper output after confirming there is no problem.

• CAUTIONS

1. Application Limitation :

The LED's described here are intended to be used for ordinary electronic equipment(such as office equipment, communication equipment and household application).Consult PARA's sales in advance for information on application in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LED's may directly jeopardize life or health (such as airplanes, automobiles, traffic control equipment, life support system and safety devices).

2.Storage :

Do not open moisture proof bag before the products are ready to use.

Before opening the package: The LEDs should be kept at 30° C or less and 90%RH or less.

If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment: $60\pm5^{\circ}$ C for 24 hours.

3.Soldering

Do not apply any stress to the lead frame during soldering while the LED is at high temperature. Recommended soldering condition.

Reflow Soldering :

Pre-heat 120~150 °C, 120sec. MAX., Peak temperature : 240 °C Max. Soldering time : 10 sec Max. Soldering Iron : (Not recommended)

Temperature 300 $^{\circ}$ C Max., Soldering time : 3 sec. Max.(one time only), power dissipation of iron : 20W Max. use SN60 solder of solder with silver content and don't to touch LED lens when soldering. Wave soldering :

Pre-heat 100 °C Max, Pre-heat time 60 sec. Max, Solder wave 260 °C Max, Soldering time 5 sec. Max. performed consecutively cooling process is required between 1^{st} and 2^{nd} soldering processes.
