PARA LIGHT ELECTRONICS CO., LTD.
11F., No. 8, Jiankang Rd., Zhonghe Dist., New Taipei City 235, Taiwan,
Tel: 886-2-2225-3733 Fax: 886-2-2225-4800
E-mail: para@para.com.tw www.paralighttaiwan.com

DATA SHEET

PART NO. : LLS7LPG6D210G

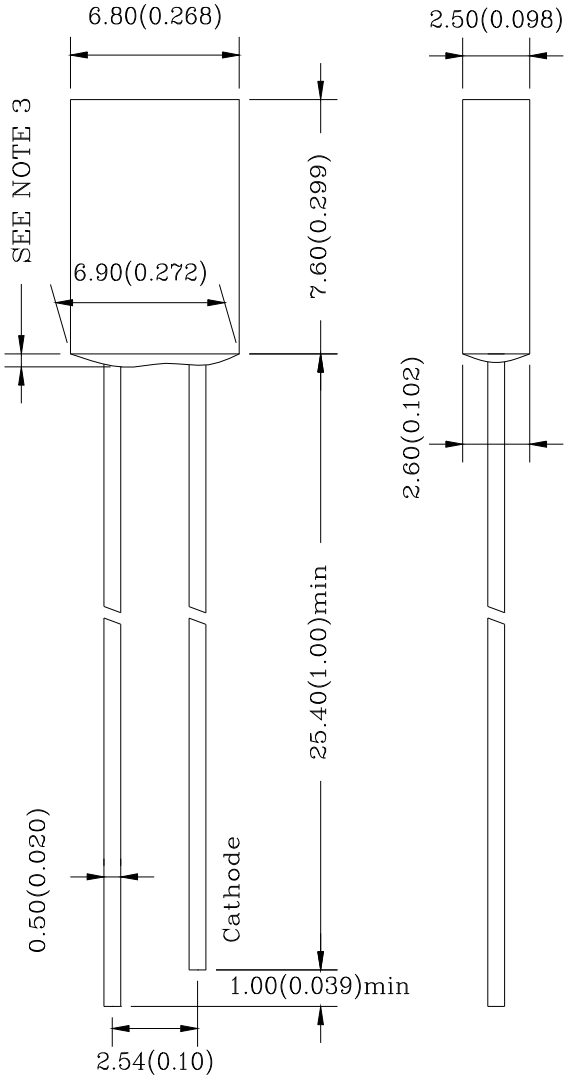
REV : A / 1

PARA LIGHT ENGINEERING:_____

CUSTOMER'S APPROVAL:_____ DCC:_____

PACKAGE DIMENSIONS

ITEM	MATERIALS
RESIN	Epoxy Resin



Note:

1.All Dimensions are in millimeters.

2.Tolerance is ±0.25mm(0.010 ")
Unless otherwise specified.

3.Protruded resin under flange
is 1.5mm(0.059 ") max.

FEATURES

* High-brightness
* High reliability
* Low-voltage characteristics
* Wide Viewing Angle
* Pb FREE Products
* RoHS Compliant

CHIP MATERIALS

* Dice Material : GaInN/GaN
* Light Color : ULTRA PURE GREEN
* Lens Color : GREEN DIFFUSED

ABSOLUTE MAXIMUM RATING : (Ta = 25°C)

SYMBOL	PARAMETER	ULTRA PURE GREEN	UNIT
P_D	Power Dissipation Per Chip	72	mW
V_R	Reverse Voltage Per Chip	5	V
I_{AF}	Continuous Forward Current Per Chip	20	mA
I_{PF}	Peak Forward Current Per Chip (Duty－0.1,1KHz)	80	mA
ESD	Electrostatic Discharge Threshold(HBM)Note A	〈1000	V
T_{opr}	Operating Temperature Range	-40°C to 85°C	
T_{stg}	Storage Temperature Range	-40°C to 85°C	

IFP Condition : Pulse Width≤10msec, 10% duty cycle

ELECTRO-OPTICAL CHARACTERISTICS : (Ta = 25°C)

SYMBOL	PARAMETER	TEST CONDITION	MI .	TYP.	MAX.	UNIT
V_F	Forward Voltage	I_F = 20mA	2.6	3.0	3.6	V
I_R	Reverse Current	V_R = 5V			10	μA
λp	Peak Emission Wavelength	I_F = 20mA	510	525	535	nm
Δλ	Spectral Line Half-Width	I_F = 20mA		25		n
2θ1/2	Half Intensity Angle	I_F = 20mA		150		deg
I_V	Lumin us Intensity	I_F = 20mA	71.5	175	390	mcd

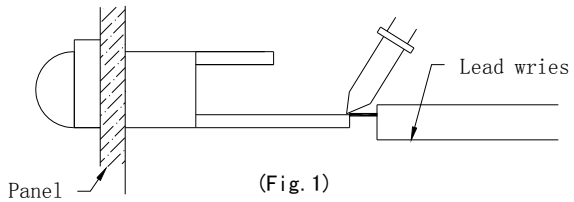
A---EN: For series number
B---L: Lamp
C---L: Local
D---Year
E---Month
F--- Serial number

•SOLDERING

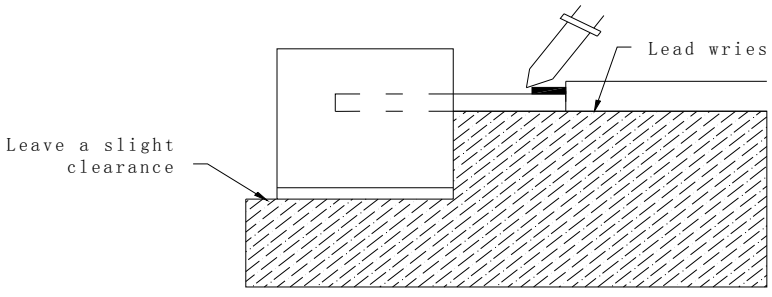
METHOD	SOLDERING CONDITIONS	REMARK
DIP SOLDERING	Bath temperature: 260℃ Immersion time: within 3 sec, 1 time	• Solder no closer than 3mm from the base of the package • Using soldering flux," RESIN FLUX" is recommended.
SOLDERING IRON	Soldering iron: 30W or smaller Temperature at tip of iron: 300℃ or lower Soldering time: within 3 sec.	• During soldering, take care not to press the tip of iron against the lead. (To prevent heat from being transferred directly to the lead, hold the lead with a pair of tweezers while soldering)

1) When soldering the lead of LED in a condition that the package is fixed with a panel (See Fig.1), be careful not to stress the leads with iron tip.



(Fig. 1)

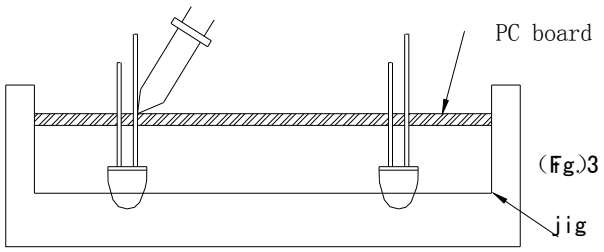
2) When soldering wire to the lead, work with a jig (See Fig.2) to avoid stressing the package.



(Fig. 2)

Regarding tinning the leads, compound made of tin ,copper and sliver is proposed with the temperature of 260℃. The proportion of the alloyed solution is 95.5% tin, 3.5 % copper, 0.5% silver. The time of tinning is 3 seconds.

3) Similarly, when a jig is used to solder the LED to PC board, take care as much as possible to avoid stressing the leads (See Fig.3).



(Fig.)3

4) Repositioning after soldering should be avoided as much as possible. If inevitable: select a best-suited method that assures the least stress to the LED.
5) Lead cutting after soldering should be performed only after the LED temperature has returned to normal temperature.

• STORAGE

1) The LEDs should be stored at 30℃ or less and 70% RH or less after being shipped from PARA and the storage life limit is 1 year .
2) PARA LED lead frames are comprised of a tin plated iron alloy. The surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LEDs to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the LEDs be used as soon as possible.
3) Please avoid rapid changes in ambient temperature, especially, in high humidity environments where condensation can occur.

• STATIC ELECTRICITY

1) Static electricity or surge voltage damages the LEDs.
   It is recommended that a wrist band and an anti-electrostatic glove be used when handling the LEDs.
2) All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the LED mounting equipment.
3) When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity. To find static-damaged LEDs, perform a light-on test or a VF test at a lower current (below 1mA is recommended).
4) Damaged LEDs will show some unusual characteristics such as the leakage current remarkably increases, the forward voltage becomes lower, or the LEDs do not light at the low current.

•LED MOUNTING METHOD

1) When mounting the LED to a housing, as shown on Fig.4, ensure that the mounting holes on the PC board match the pitch of the leads correctly. Tolerance of dimensions of the respective components including the LEDs should be taken into account especially when designing the housing, PC board, etc. to prevent pitch misalignment between the leads and holes on PCB, the diameter of the holes should be slightly larger than the size of the lead. Alternatively, the shape of the holes could be made oval. (See Fig.4)

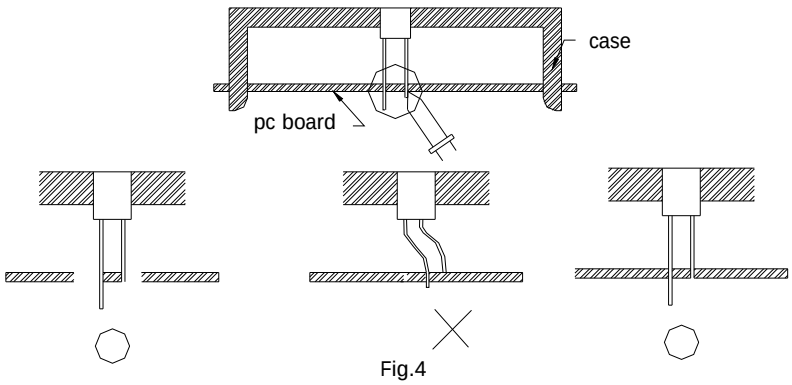


Fig.4

2) Use LEDs with stand-off (Fig.5) or the tube or spacer made of plastic (Fig.6) to position the LEDs.

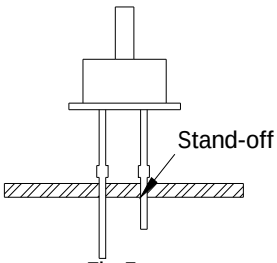

Fig.5

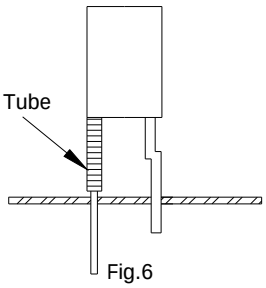

Fig.6

•FORMING LEAD

1) The lead should be bent at least 2mm away from the package. Bending should be performed with base fixed to a jig to pliers (Fig.7)

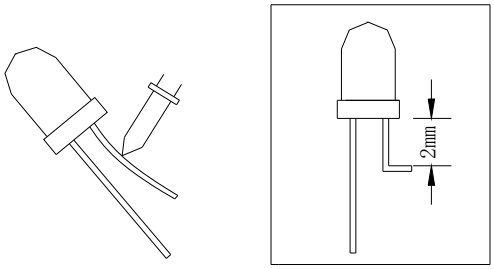

Fig. 7

2) Forming lead should be carried our prior to soldering and never during or after soldering.
3) Form the lead to ensure alignment between the leads and the holes on PCB, so that stress against the LED is prevented. (Fig.8)

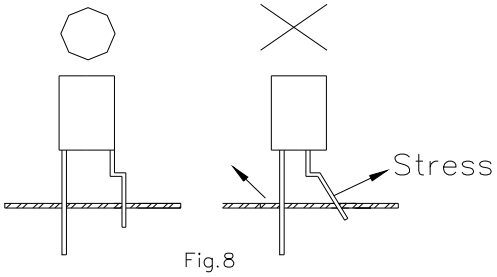

Fig.8

•LEAD STRENGTH

1) Bend strength
   Do not bend the lead more than twice. (Fig.9)

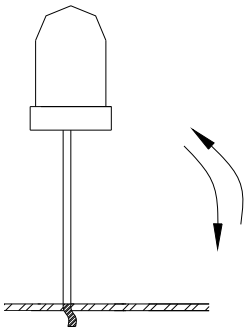

Fig.9

2) Tensile strength (@Room Temperature)
   If the force is 1kg or less, there will be no problem. (Fig.10)

Fig.10

• HEAT MANAGEMANT

1) Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when designing the system. The temperature increase is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.
2) The operating current (IF) should be decided after considering the ambient maximum temperature of LEDs.

•CHEMICAL RESISTANCE

1) Avoid exposure to chemicals as it may attack the LED surface and cause discoloration.
2) When washing is required, refer to the following table for the proper chemical to be used. (Immersion time: within 3 minutes at room temperature.)

SOLVENT	ADAPTABILITY
Freon TE	⊙
Chlorothene	╳
Isopropyl Alcohol	⊙
Thinner	╳
Acetone	╳
Trichloroethylene	╳

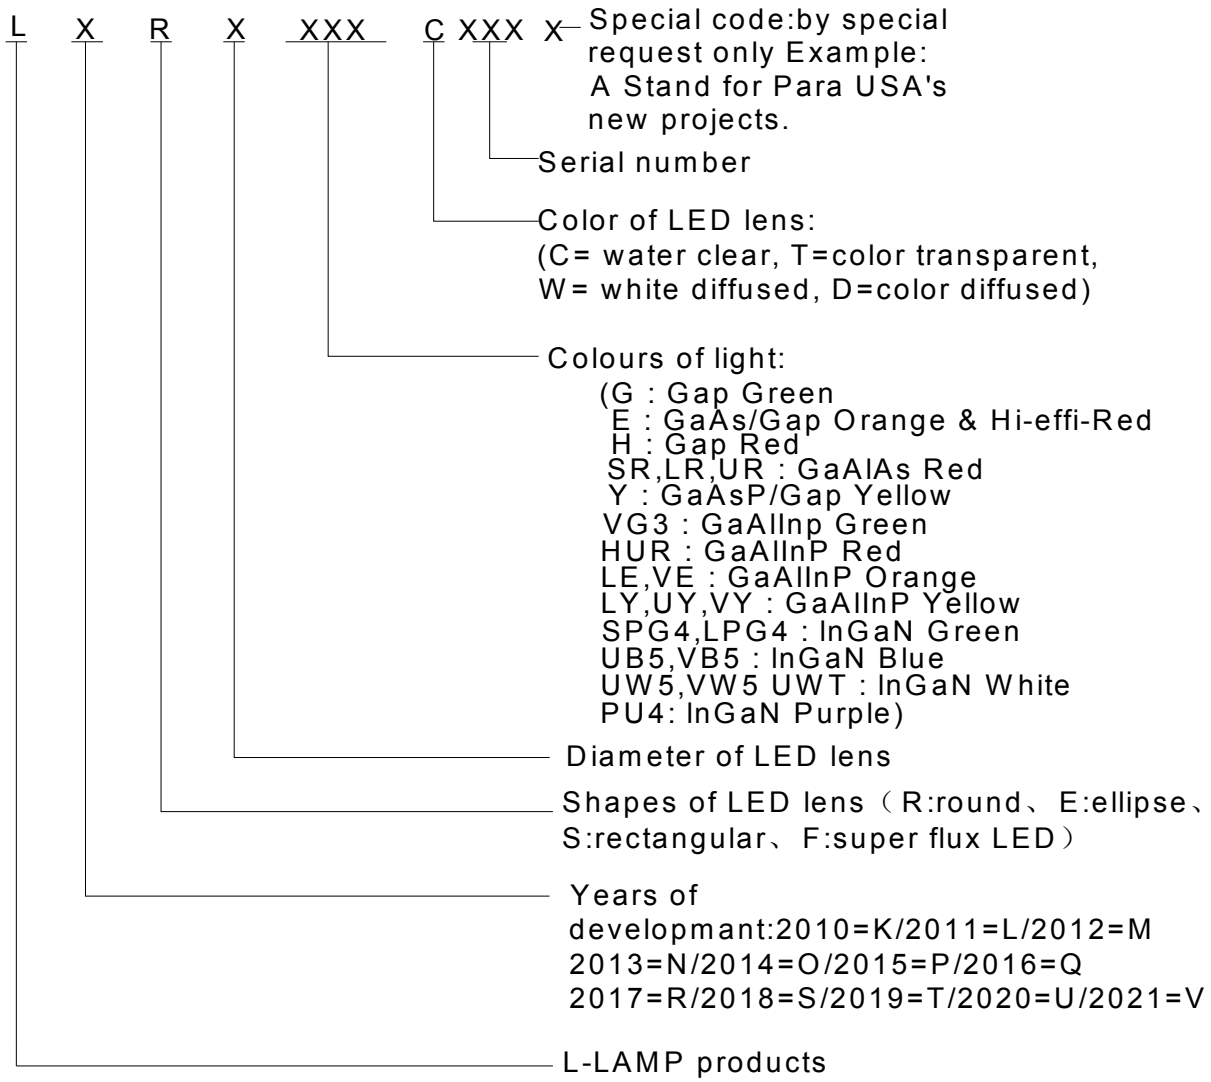
⊙--Usable ╳--Do not use.

NOTE: Influences of ultrasonic cleaning of the LED resin body differ depending on factors such as the oscillator output, size of the PC board and the way in which the LED is mounted. Therefore, ultrasonic cleaning should only be performed by confirming an ultrasonic cleaning trial run.

•OTHER CONSIDERTIONS

1) Care must be taken to ensure that the reverse voltage will not exceed the absolute maximum rating when using the LEDs with matrix drive.
2) The LEDs described in this data sheet are intended to be used for ordinary electronic equipment (such as office equipment, communications equipment, measurement instruments and household appliances). Consult PARA's sales staff in advance for information on the applications in which exceptional quality and reliability are required , particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as for airplanes, spacecraft, automobiles, traffic control equipment etc).
3) The formal specifications must be exchanged and signed by both parties before large volume purchase begins.

LED Lamps: Part Number Rules



Bin Code List

Luminous Intensity(IV), Unit:mcd@20mA		
Bin Code	Min	Max
A3	71.5	100
A	100	140
B	140	200
C	200	280
D	280	390

Tolerance of each bin are±15%

Dominant Wavelength (λD), Unit:nm@20mA		
Bin Code	Min	Max
D3	510	515
D4	515	520
D5	520	525
D6	525	530
D7	530	535

Tolerance of each bin are±1nm

Forward Voltage (VF), Unit:V@20mA		
Bin Code	Min	Max
V01	2.6	2.8
V0	2.8	3.0
V1	3.0	3.2
V2	3.2	3.4
V3	3.4	3.6

Tolerance of each bin are±0.1V
